

OCULAR SENTINEL

AUTONOMOUS C4ISR EARLY-WARNING SYSTEM

[INITIALIZE SENTINEL]

PROBLEM:

Human monitoring is unscalable and prone to fatigue.

Traditional CV is narrow (only sees "Person" or "Car").

SOLUTION:

Proactive Anomaly Detection
&
Actionable Intelligence in
milliseconds.

Powered by Vision-Language Models
(VLMs)

[Camera Feed] → [YOLO8 (Tripwire/Buffer)] → [AMD MI300X Cloud / Notebook (Qwen2-VL)] → [Dashboard]

Why Vision-Language Models (VLMs)?

Bounding boxes.

THREAT CONFIRMED 9:47:57 AM

A photograph of a car accident scene on a highway. A white car is involved in a collision, and several people are standing around it. A fire truck is visible in the background.

TYPE CONFIRMED ANOMALY

CONFIDENCE 95.0%

INCIDENT REPORT
MOCK INCIDENT: Class B vehicular fire detected on Highway M-14, Northbound lanes. Intense thermal signature and dense toxic smoke plume expanding across adjacent lanes. Primary chassis heavily engulfed. High risk of secondary explosions from fuel tank ignition. Traffic obstruction critical. Immediate dispatch of specialized HazMat fire response required.

Contextual incident reports.

LIVE DEMONSTRATION

[MOCK MODE—The notebook used for the Qwen2-VL is limited to 8 hours per 24 hours only]

The Market (B2B & B2G)

**\$83B+ Video Surveillance
Market by 2030.**

FUTURE: Multi-modal audio and physical sensor integration (e.g., glass breaking, gunshots, violent shaking).

**Developed by Montazar Matlih
Ocular Labs**
